Historical Background

In their meeting of February 1980, the Seven Members Committee of Governors of Arab Central Banks and Monetary Authorities recommended that the Arab Monetary Fund, be in charge of preparing a Joint Annual Report on economic developments in the Arab region, in cooperation with the General Secretariat of the Arab League and other Arab regional specialized institutions, in order to avoid duplicating the efforts made by each of them and to provide a unified source of data and information on the Arab economies. The Joint Report provides Arab ministers of Economy and Finance, Central Bank governors, Arab Monetary Authorities, and other interested stakeholders in Arab economic affairs with information about recent developments in the economies of Arab countries to enable them to discuss key issues facing the Arab region, whether in terms of their relationships with each other or their relationships with other countries of the world.

The first edition of the Joint Arab Economic report was issued in August 1980, the result of fruitful cooperation with the Arab Fund for Economic and Social Development (AFESD). The General Secretariat of the League for Arab States joined the cooperation effort starting from the 2nd edition of the Report, and the Organization of Arab Petroleum Exporting Countries (OAPEC) from the 3rd edition.

The four institutions participating in preparing the report hope to have been successful in achieving the objective of describing the Arab economic situation, practically, objectively, and neutrally, within a concise framework that reflects the most important features of Arab economies' trends. Therefore, this may provide useful material for decision makers and researchers interested in the economic affairs and development of the Arab region. The participating institutions also hope that such analytical efforts be enhanced continuously, benefiting from comments and suggestions by various stakeholders. To this end, they hope the Report becomes a main reference to follow up developments in Arab economies and to assist in the economic policy-making that promotes development and stability in the Arab region at large and supports the joint Arab action and cooperation.

Abbas Ali Al-Naqi
Secretary General
Organization of Arab
Petroleum Exporting
Countries (OAPEC)

Preface

Edition 35 of the Joint Arab Economic Report 2014 (JAER), as is the case since its first edition published in 1980, addresses economic developments in the Arab economies.

This report is the result of a fruitful cooperation among Arab institutions. It is co-authored by the General Secretariat of the League of Arab States, Arab Fund for Economic and Social Development, Arab Monetary Fund and Organization of Arab Petroleum Exporting Countries (OAPEC). Each of these four institutions prepares their respective chapters annually, in line with the agreed upon concept note. In addition, the Arab Monetary Fund has held editing and publishing responsibilities since 1980.

A draft Report is submitted, for limited circulation, to enable member states to provide comments and feedback, during the annual September meeting of the Governors Arab Central Banks and Monetary Authorities as well as to the September meeting of the Economic and Social Council of Ministers. In light of such comments and suggestions, the Arab Monetary Fund, in coordination with the other participating institutions, edits the final draft and publishes the Report before the year's end.

The participating institutions endeavor to ensure that the Report reflects objectively the current situations of Arab economies, drawing on the most recently available data and information, as well as on an established methodology in the preparation of the Report.

The JAER authors collect the required data and information from reliable national sources and make necessary estimations for the missing data, in order to submit the report on time. The Arab official statistical authorities have responded periodically by completing the Report Questionnaire. We hope this positive stance will continue to enable the Report authors to provide an overall view on the Arab economies.

In terms of the Report methodology and its development, the participating institutions ensure that the individual Chapters provide the analysis of Arab economic conditions using key indicators, after a thematic classification of the Arab countries to facilitate comparative analysis. To this end, the figures are calculated using the US dollar at the exchange rates provided by the member country for the Report purposes.

Finally, each year the JAER includes a special thematic Chapter, that deals with a major economic issue, and the contents of the other Chapters should reflect this issue, as far as possible.

We hope that this JAER issue will, like the previous editions, serve as a useful reference for decision makers and economic analysts as well as researchers.

Basic Indicators for Arab Countries in 2014

Area	
Total Area	13.3 (Million Km ²)
Arab Region Area to World Area	9.6 Percent
Population and Work Force	
Total Arab Population	378 (Million)
Total Arab Population to World Population Ratio	5.2 (Percent)
Arab Total Work Force	124 (Million Workers in 2013)
Unemployment Rate*	11.3 (Percent)
Gross Domestic Product	
GDP Value at Current Prices	2,757 (Billion USD)
Annual Growth Rate (at current prices)	1.5 (Percent)
Annual Growth Rate (at constant prices)**	2.5 (Percent)
GDP Per Capita (at current prices)	8,004 (USD)
Agriculture Value Added to GDP	5.3 (Percent)
Extractive Industries Value Added to GDP	34.2 (Percent)
Manufacturing Industries Value Added to GDP	9.8 (Percent)
Services Value Added to GDP	43.2 (Percent)
Oil & Natural Gas	
Arab Oil Reserves to World Reserves	55.2 (Percent)
Arab Natural Gas Reserves to World Reserves	27.5 (Percent)
Arab Crude Oil Production	22.9 (Million barrels per day)
Arab Crude Oil Production to World Production	30.1 (Percent)
Arab Natural Gas Production to World Production	17.0 (Percent in 2013)
Proceeds of Oil Exports (estimated at current prices)	612 (Billion USD)
Trade	
Arab Merchandise Exports (fob)	1229.6 (Billion USD)
Arab Merchandise Exports to World Exports	6.5 (Percent)
Arab Merchandise Imports (cif)	889.3 (Billion USD)
Arab Merchandise Imports to World Imports	4.7 (Percent)
Value of Intra-Arab Exports	122 (Billion USD)
Intra-Arab Exports to Total Arab Exports	9.9 (Percent)
External Official Reserves***	
Official Reserves Assets	1,353 (Billion USD)
Import Coverage	19.8 (Month)
External Public Debt of Arab Borrowing Countries	
External Public Debt	206.8 (Billion USD)
Value of External Public Debt Service	19.3 (Billion USD)
External Public Debt to GDP	21.7 (Percent)
External Public Debt Service to Exports	5.9 (Percent)

***Excluding Gold.

The Joint Arab Economic Report 2015

Overview

The Joint Arab Economic Report 2015 presents an overview of economic developments that took place in the Arab countries during 2014. It begins with a summary review of the performance of the global economy in Chapter 1 followed by economic and social developments in Arab countries in Chapter 2. Chapter 3 and 4 review developments in the agricultural and the industrial sectors in Arab countries respectively, while Chapter 5 deals with developments in oil and energy sectors. Chapter 6 reviews public finance developments and Chapter 7 addresses developments in monetary policy, banking and financial markets. Chapter 8 outlines developments in international and intra-regional trade, and Chapter 9 describes developments in the balances of payments, external public debt and exchange rates in Arab countries.

Chapter 10 is the thematic chapter of the report. The chapter addresses this year the issue of “Improving Linkages Between Education System And Labor Markets In Arab Countries”. Chapter eleven sheds lights on Arab development assistance. Chapter 12 is focusing this year on Arab cooperation in the Field of “Marine Transport and Logistics”. Chapter 13 highlights major developments in the Palestinian economy in 2014. Finally, tables relevant to each chapter are annexed

(Chapter 1)

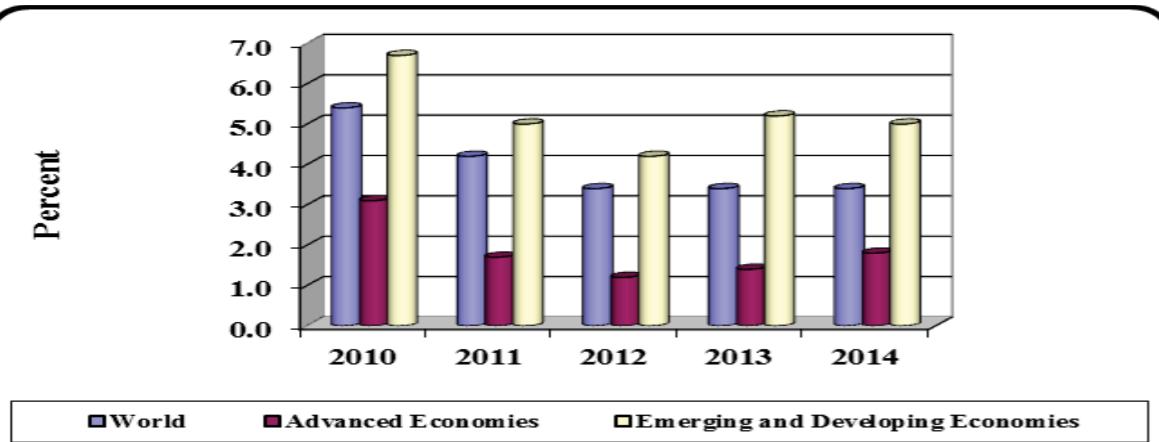

Global Economic Performance

Global economic growth rate continued at a moderate level for the third year in a row. It recorded 3.4%. While accommodative monetary policies in advanced economies and lower global oil prices supported the pace of global economic growth, rising global unemployment to more than 200 million, including 18 million persons in the euro area, reduced the impetus of global economic growth. This mainly reflects the negative impact of unemployment on private consumption. Furthermore, political unrest in a number of regions suppressed a higher rate of global economic growth

In 2014, advanced economies scored favorably in terms of growth performance compared to the previous year. The euro area recorded a moderate recovery following a multi-year crisis. Growth was positive during 2014 following deflation during the previous two years. US economy recorded a better performance, although it fell short of reaching the projected levels. A significant development is the fact that US economy in 2014 created more new jobs. UK economy benefited from lower oil prices and improved investor confidence relative to the euro area. It recorded the highest economic growth rate among advanced economies, at about 2.6%. Despite expansionary measures adopted during 2013 in support of economic activity last year, the Japanese economy could not benefit from the impact of those measures, or from lower oil prices, to record a positive growth rate in 2014, on the contrary, it recorded a slight contraction. In 2014, developing and emerging market economies continued to be the main drivers of global economic growth, albeit at lower rates relative to pre-crisis ones. The focus by these economies on domestic policies in support of growth contributed to stronger domestic demand.

In aggregate, as an outcome of the above developments, **Global Economic Growth Rate** remained stable at the same level recorded in 2013, i.e., about 3.4%. In 2014, advanced economies grew at 1.8%, up from 1.4% in 2013. Despite recording a higher growth rate compared to advanced economies, at 4.6% in 2014, developing and emerging market economies fell below the 5% growth they had recorded in 2013. (Annex Table 1/1 & Figure 1.1).

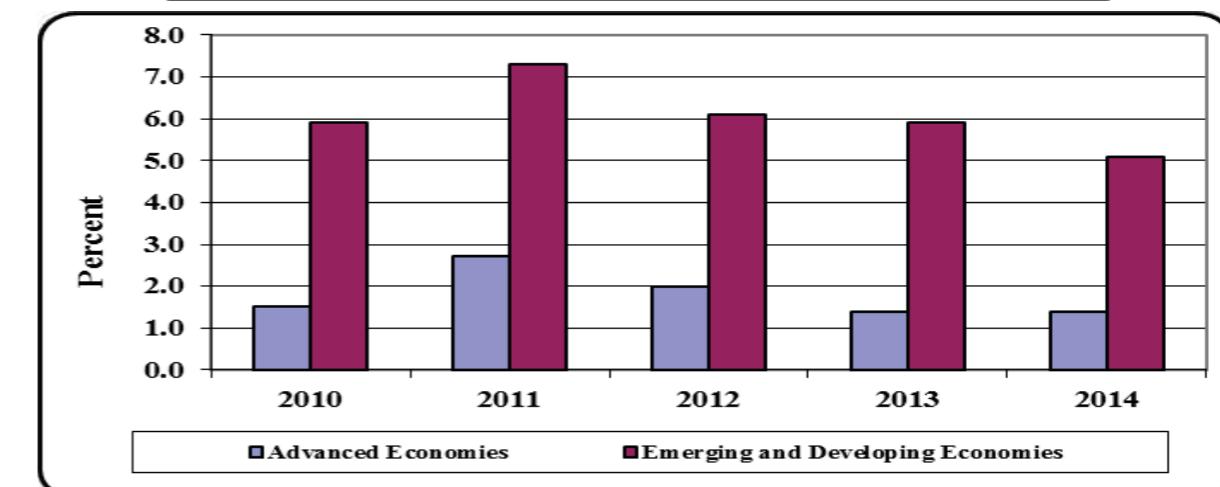

Figure 1.1
Real GDP Growth Rate of World, Developed and Developing Economies
(2010-2014)

Source: Annex 1/1

Reflecting a stable global growth rate, **Global Inflation Rate** stabilized at the same level recorded in the previous year. Several factors, mainly lower oil prices during the second half of 2014, tightening measures adopted by euro area to control sovereign debt, and higher unemployment rates in a number of regions around the world helped suppress inflation, (Annex Table 1/2 & Figure 1.2).

Figure 1.2
Inflation in Developed & Developing Countries
(2010-2014)

Source: Annex 1/2.

In 2014, **Unemployment Rate** moderately receded in advanced economies to about 7.3%, down from 7.9% in 2013. Despite such a decrease, it remains high. In fact, it remains higher than the global average of about 5.6%. The picture is even darker in the euro area. Despite signs of bottoming up, unemployment rate did not recede much in the euro area; it remained at a high 11.6% in 2014 against 12% in 2013. This is the highest unemployment rate recorded in advanced economies during the last ten years. Estimates suggest that the number of unemployed in the euro area alone was as high as about 18 million in mid-2014, of which about 3 million were youth in the age group of 15-24 years, (Annex Table 1/3).

On **Global Monetary Developments**, short term interest rates in advanced economies tended to moderate against the backdrop of expansionary measures adopted by central banks. A number of advanced economies maintained low interest rates in 2014 while others, with the sole exception of US, brought them further down. Similarly, long-term

interest rates tended to moderate in advanced economies, except in the US. They moderated in Japan, the euro area and the UK, while long-term interest rates strengthened in the US following the announcement by the US Federal Reserve of intention to withdraw quantitative easing program and to revert back to traditional monetary policy as US economic growth strengthened, (Annex Table 1/4).

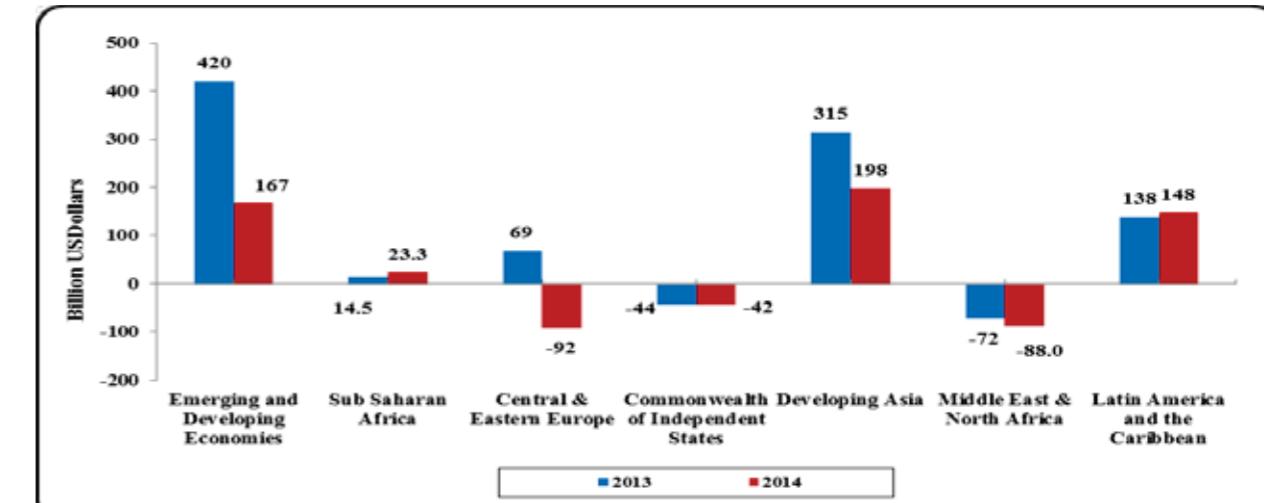

Lower global growth rates, coupled with tightened measures, had an impact on **Foreign Trade Growth Rates** in 2014. Contrary to the trend observed over the last three decades, trade grew at the same level of observed global economic growth. It grew at 3.4% in 2014, down from 3.5% in 2013. This moderate international trade performance reflected, inter alia, significantly lower levels of global demand following the onset of the global financial crisis and growing protectionist policies in a number of advanced economies, particularly in the euro area. The recently adopted agreement in Bali towards the end of 2014 on the implementation of the “Doha Round” agreements suffered a setback due to India’s decision in July 2014 to reject those agreements. On the other hand, with China becoming the largest global trading power, it became less dependent on imported inputs, thereby causing international trade levels to moderate.

As to **Current Transaction Balances**, advanced economies recorded higher balance of payments current account surpluses in 2014 to about USD 169.9 billion, up from about USD 157.6 billion in 2013, despite the fact that US current account deficit grew to USD 410.6 billion in 2014, up from USD 400.3 billion in 2013. This improvement in current transaction balances of advanced economies reflected higher current account surpluses recorded by the euro area from USD 284.3 billion in 2013 to USD 313 billion in 2014, at a growth rate of about 10%. This was the outcome of protectionist measures adopted by the euro area, lower oil and commodity import bill and lower imports due to lackluster economic growth. (Annex Table 1/6).

Net Foreign Private Financial Inflows to Developing Countries dropped again to about USD 167 billion in 2014, down from USD 419.9 in 2013, a 60.2% drop, thus falling to its lowest level for more than 10 years. This reflected modest economic growth in Europe as well as geopolitical risks in some of these countries, as well as the impact of lower oil

prices on the Russian economy and an appreciating US dollar. As a result, part of those flows went to advance economy markets, particularly the US, with prospects of higher US interest rates growing stronger, (Annex Tables 1/7, 1/9 & Figure 1.3.)

Figure 1.3
Net Private Capital Flow to Emerging and Developing Countries
(2013-2014)

Source: Annex 1/7.

Foreign Indebtedness data suggest that outstanding aggregate foreign public debt on developing and emerging market economies grew at 4.7% to USD 7791 billion in 2014, up from USD 7436 billion in 2013. This reflected increasing financing needs for these countries due to higher levels of foreign and domestic deficits.

As to **Major Currency Exchange Rate** developments, the US dollar strengthened against other currencies, thanks to policies adopted by the US Fed. Furthermore, recent pro-private capital measures and polices supported a stronger USD. On the other hand, the inability of the euro area to break the vicious circle in which it has been moving since the onset of the global financial crisis in 2008 and the lackluster performance of the Japanese economy over several years deepened USD gains against both the euro and the yen during 2014, (Annex Table 1/10).

(Chapter 2)

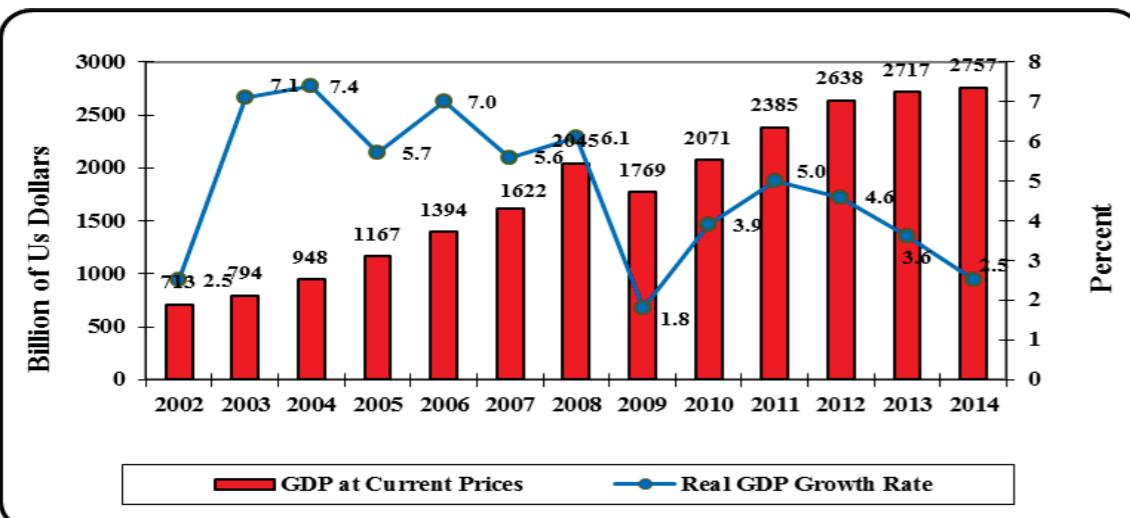

Economic and Social Development in Arab Countries

Macroeconomic Developments

Economic Growth in Arab countries during 2014 continued to reflect the same factors that affected its performance in 2013, i.e., the spillovers of domestic conditions in some Arab countries and the impact of receding receipts of oil exports in a number of Arab oil producers due to downward movement of international oil prices and receding or stable levels of production in a number of oil exporters. The limited recovery of euro area economies did not help a recovery of demand on exports of a number of Arab oil importers such as Tunisia, Morocco and Egypt.

Gross Domestic Product (GDP) at Current Prices in Arab countries as a group has been estimated at about USD 2757 billion at a growth rate of about 1.5%. This is lower than the approximately 3.0% rate observed in 2013. Arab countries combined recorded a lower growth rate of **GDP at Constant Prices**, about 2.5% in 2014, down from 3.6% in 2013, reflecting the above conditions (Annex Table 2/1, 2/2 & Figure 2.1).

Figure 2.1
GDP at Current Prices & Real GDP Growth Rate of Arab Countries*
(2002-2014)

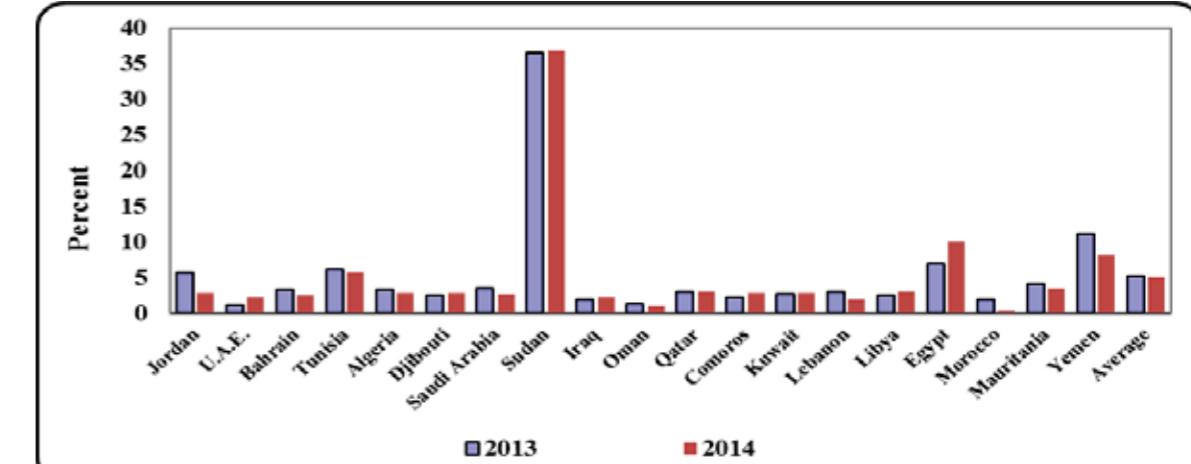

* Excluding Syria (for lack of data) and Libya (due to sharp fluctuations of growth following 2011).

Source: Annex 2-1, estimates by the authors of the report, based on national and other international sources, estimates of country product in domestic currency in constant prices, aggregated after unifying base year, and converted to estimates in US\$ at the exchange rates of domestic currencies in base year 2005.

For Arab sub-regions, **Growth Rate of GDP** at constant prices in major oil exporters was recorded at about 2.4% in 2014, up from 2.0% in 2013, while in GCC countries it was recorded at about 2.9% in 2014, down from 3.6% in 2013. In Arab oil importers, average growth rate receded from about 3.0% in 2013 to about 2.5% in 2014 for different reasons,

Average Per Capita GDP at current prices in Arab countries combined dropped to about USD 8004 in 2014, down from USD 8069 in 2013, a 0.81% drop against a positive growth rate of about 0.52% in 2013. But weighted constant price per capita GDP growth rate in Arab countries increased by about 0.13% in 2014, compared to 0.81% in 2013, (Figure 2.2).

Figure 2.2
Inflation Rates in Arab Countries
(2013-2014)

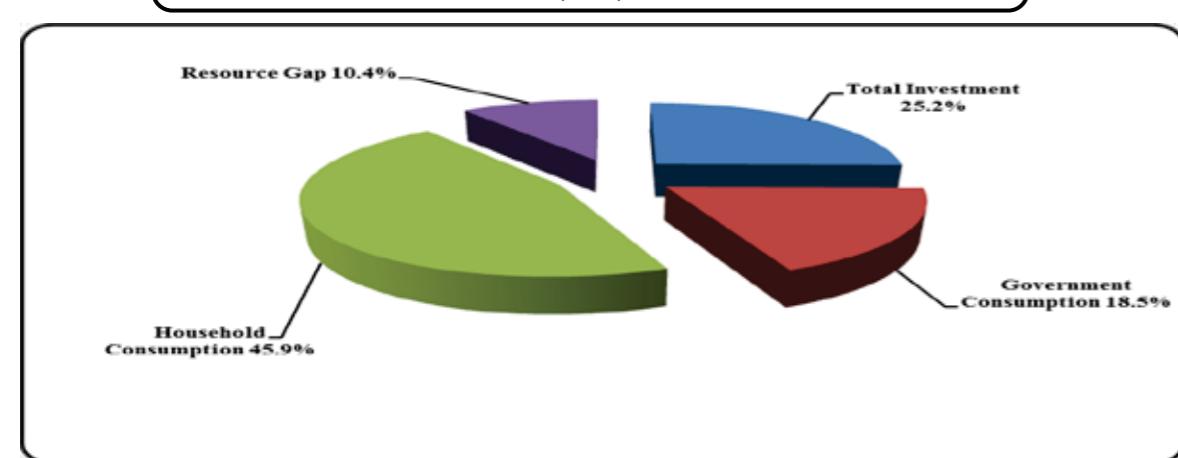

Source: percentages are calculated using data from the Joint Arab Economic Report questionnaire for 2015 and other national and international sources.

As to the **Sectoral Structure of GDP**, the contribution of commodity production sector dropped to 57.3% in 2014, down from 59.7% in 2013, while the rest of sectors improved their respective contributions to GDP, (Annex Table 2/3).

While value added of extractive industries dropped at 8.5% in 2014, value added generated by manufacturing and other production sectors increased. As to the **Distribution of Product by Expenditure Items**, consumer spending for both households and government accounted for 64.4% of total expenditure, up from about 60.1% in 2013. Investment also

accounted for a higher share compared to the previous year, while the contribution of exports to GDP dropped. (Annex Table 2/5 & Figure 2.3).

Figure 2.3
Distribution of GDP by Expenditure Items
(2014)

Source: Annex 2/5.

Available **Poverty** data suggest that poverty rates have increased, particularly in countries that have gone through unfavorable domestic conditions due to weakening growth and living conditions, apart from the relapse of an increasing number of people into poverty due to an increasing influx of immigrants from some Arab countries. In addition to income poverty, some Arab countries suffer from unequal distribution of education and health services and deteriorating living conditions in general.

But Arab countries compare favorably to other country groups in income and spending inequality. However, there is a significant variation among Arab countries in this respect. Research suggests that income and spending inequality in Arab countries is mainly explained by certain factors that are out of control for individuals, such as place of birth (urban versus rural), level of education of the head of household, size of the household. This calls for doubled efforts in order to improve levels of equal distribution of education and health services and reduce income inequality among different regions within a country, (Annex Table 2/7).

Social Developments

On progress towards **Achieving MDGs**, it is noted that, with few exceptions, Arab countries have managed to achieve these goals by 2015 in order to get ready for the new set of goals agreed upon by the international community for post-2015, better known as Sustainable Development Goals (SDGs). However, despite positive developments on a good number of social indicators in the region, the majority of Arab countries continue to face challenges in education and health sectors, particularly in Arab LDCs, apart from other problems, including high unemployment among educated youth and low labor force participation of women. The best rank assigned to an Arab country, namely UAE, in Knowledge Economy index 42 worldwide, followed by Oman and Saudi Arabia at 47 and 50, respectively, remain below the desired level. The rank of the rest of Arab countries appears in the lower part of the list. This indicates that the Arab region continues to face significant challenges before it can catch up with developed countries on human resource efficiency and productivity.

On human development, UNDP Human Development Index 2014 has classified Arab countries under the “medium-level human development” category at 0.68 point. Despite progress made by Arab countries in human development, favorably comparing to the 0.59 point rank for developing countries, they remain well behind the 0.89 point assigned to countries with high levels of human development for the same year.

Total **Population** of the Arab countries is estimated at about 378 million people in 2014. The average growth rate during 2000-2014 was about 2.2%. This population growth rate, which has not significantly decreased for many years, remains relatively high. With the only exception of Sub-Saharan Africa, it is the highest across all world major regions. The highest population growth rate worldwide was recorded in Qatar at about 9.3% due to policies aiming at attracting expatriate labor to implement mega investment projects. Population growth rates in Oman, Kuwait, Libya, Sudan and Djibouti remain higher than 3.0% per annum, (Annex Table 2/8 & 2/9).

The **Education Sector** in Arab countries faces a host of challenges, mainly the need to accommodate an increasing demand on education for new generations, with ensuing increasing need for investment. Development and education policies in the region have

focused mainly on the expansion of access to education services at the elementary level. Efforts need to be doubled in order to expand such achievements into preparatory, secondary and technical levels which, unlike primary education, have been less able to offer greater access.

On enrollment in elementary education stage, the MDG goals call for universal primary education by 2015, and this has been already fulfilled by most Arab countries. An upward trend has been observed in net enrollment rates in most Arab countries. On enrollment in secondary stage, available data suggest that it has exceeded 80% in 12 Arab countries, while it falls below that level in the rest of the region. The gender index for secondary education suggests that enrollment rates for boys and girls in secondary education are about the same, if not favorable for girls, in all Arab countries.

Latest available data show that expenditure on education as share of GDP accounted for 4.5% in 2014. However, spending on education in Arab countries continues to prove insufficiently effective; it does not help improve labor productivity or increase per capita income. Unlike the data for developing countries as a group, statistics for Arab countries show that education system is biased towards tertiary education at the expense of other stages. The share of spending on one student at the tertiary stage is about ten-fold higher than on a primary stage student, (Annex Tables 2/10 -2/13).

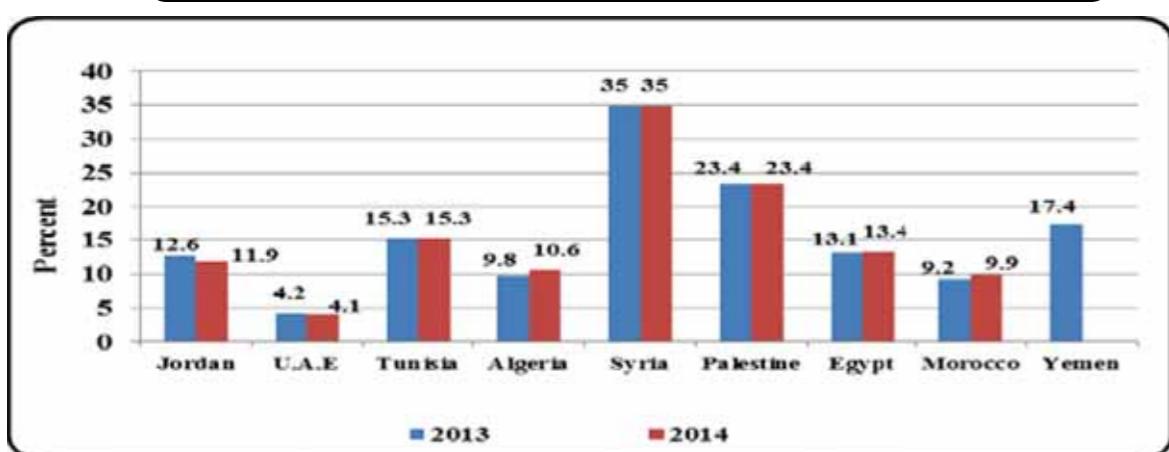

On **Health Indicators**, average life expectancy at birth rose in Arab countries from 45 years in 1960 to about 71 years based on latest data available, slightly above the world average of 70 years. Most Arab countries made significant progress in expanding health services, as evidenced by the increase in the number of Arab countries that managed to provide health care to 95% of their total population, now totaling 14 countries. However, six Arab countries significantly suffer from scarcity of trained medical cadres and clinic beds. Spending on health as a percentage of GDP in Arab countries reached about 6% based on latest available data. This is much below the 10.2% world average. This shows the need to increase spending on health care in Arab countries and improve its cost effectiveness, (Annex Table 2/14 and 2/15).

Available data on access to **Safe Potable Water** suggest that there is a significant disparity among Arab countries in levels of access to safe potable water. However, the average percentage for Arab countries as a group suggests that they have made significant progress towards this goal that compares favorably to developing countries as a group. Based on latest data, this indicator has been recorded at about 90% for the Arab region, well above the 64% level observed for developing countries as a group. The gap between urban and rural areas, however, remains wide in access to safe potable water, with about 95% in urban areas against a maximum of 83% for rural areas in 2012, (Annex Table 2/16).

Estimates by Arab Labor Organization suggest that growth rates of Arab labor force have followed an upward trend during the current decade. This relative increase could be explained by two factors: the nature of population structure and the increase in women's labor market participation, although there is still a persistent wide gap in favor of male population. Sectoral distribution of labor force in the Arab region continues to suggest that economic activity is not sufficiently diversified and that Arab economies are not adequately integrated into knowledge economy. It also suggests that Arab countries continue to face challenges in strengthening the efficiency of educational institutions and their capability to train new qualified generations that are in a position to be internationally competitive on a solid basis, (Annex Table 2/17, 2/18 & Figure 2.4).

The total number of work force in the Arab region is estimated at about 124 million people, i.e., about 33.2% of total population of the region in the same year. It may be noted that this percentage is lower than the averages for the world and developing countries as a group of about 65% and about 70.5%, respectively. This is explained by the high share of age group below 15 years and low participation of women in labor markets despite the upward trend of that participation.

Figure 2.4
Unemployment Rates in Selected Arab Countries
(2013-2014)

* For GCC countries, unemployment includes both citizens and expatriates.

Source: Annex 2/18 and report authors' estimates based on official sources and different international data.

facilities to the private sector to increase investment in agriculture and to expand use of modern agricultural technology.

Despite the vital importance of agriculture to Arab countries and the moderate improvements achieved over the last couple of years, this progress remains of limited significance due to the modest size of cultivated land, scarce water resources, low efficiency of irrigation, small size of irrigated land, the technological gap between outputs of agricultural research and the needs of agricultural development, low crop yield and livestock productivity in most Arab countries.

Total **Agricultural Lands** in 2013 accounted for about 33% of total lands that could be cultivated. The area of rain-fed agriculture lands accounts for about 60% of total seasonal agriculture land against 22% for irrigated agriculture land. Crop and livestock production grew at 4.5% and 1.9%, respectively, in 2014, thanks to favorable weather conditions and expansion of modern agricultural production systems.

(Chapter 3)

Sectoral Developments

Agriculture and Water

Agriculture is one of the most important economy sectors in Arab countries from economic, social and environmental perspectives as well as that of interdependence relationships with other production and service sectors. In terms of inputs and products, Agriculture is a pillar to which many economic activities, including manufacturing, marketing, trade and service activities are linked and are dependent thereupon. It offers jobs to around 26 million people of Arab work force and satisfies food consumption needs of the population.

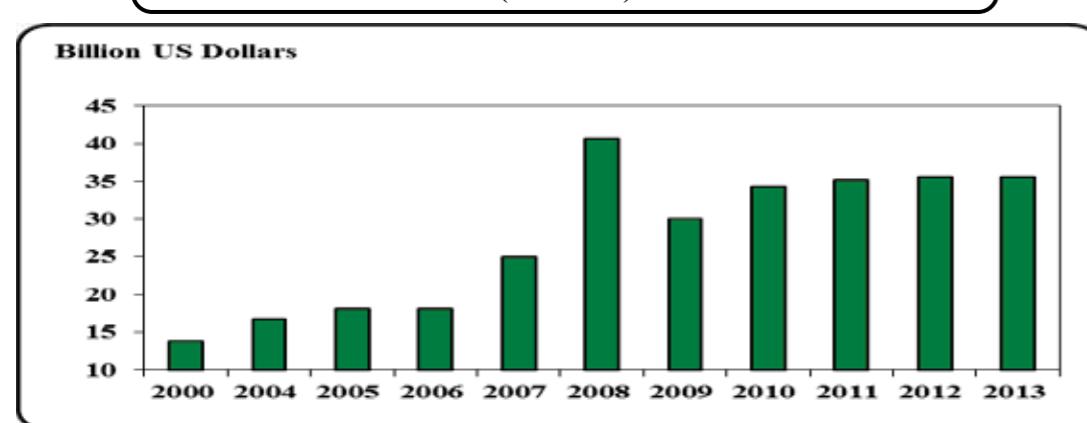

Agriculture Value Added of Arab countries at current prices in 2014 grew to about USD 146.6 billion, a 3.7% increase over the previous year. As such, it accounted for about 5.3% of total GDP of Arab countries in 2014, while agriculture value added per capita was about USD 399. In fact, the growth in agricultural product in 2014 can be explained by positive agricultural developments in main agricultural producers in the Arab region, including Egypt, the Sudan and Algeria, where policies focused on improving food security, offering

Renewable Water and Underground Water Resources in the Arab region are estimated at about 314.7 billion cubic meters in 2011. This amount cannot be fully mobilized and some of it is considered marginal and remotely located from consumption areas. Half of water resources come from outside the Arab region, a crucial fact from the perspective of Arab food and water security, due to the volatility and deteriorated quality of those resources in the absence of an internationally documented convention that ensures the rights of Arab countries. Total uses of water are estimated at about 245.8 billion cubic meters per annum, of which about 84% goes to agriculture, about 13% to domestic uses and about 3% to industrial uses.

The percentage of **Agricultural Work Force** in Arab countries receded to 20.6% of total Arab work force in 2013. Per capita added value in the agricultural sector in Arab countries was recorded at about USD 5429 in 2013. Work force in this sector receives lower wages compared to other sectors of the economy; the income of a worker in this sector being within the range of 25-30% of average worker income in other sectors. Migration from rural to urban areas is a consequence of that imbalance. It is also one of major impediments the agricultural sector faces.

Agricultural Foreign Trade deficit in Arab countries increased to USD 71.6 billion in 2014 against USD 69.7 billion in 2013, a 2.8% increase. Food gap in main agricultural commodities continued to widen. It was recorded at USD 35.6 billion in 2013. Arab countries import about 58% of its grains needs, 61% of vegetable oil, 68% of sugar and 26% of meat. These commodities accounted for 91.7% of major food commodity gap in 2013, (Annex Table 3/11 & Figure 3.1).

Figure 3.1
Value of Food Gap in Arab Countries
(2000-2013)

Source: Annex 3/12.

(Chapter 4)

Industry

The industrial sector is a leading sector in Arab economies in terms of contribution to GDP, foreign trade, per capita income and employment. It has been the driver of economic activity for decades in the Arab region, although it has been affected recently by lower oil prices and production, lower external demand and global economic downturn as well as developments in certain Arab countries.

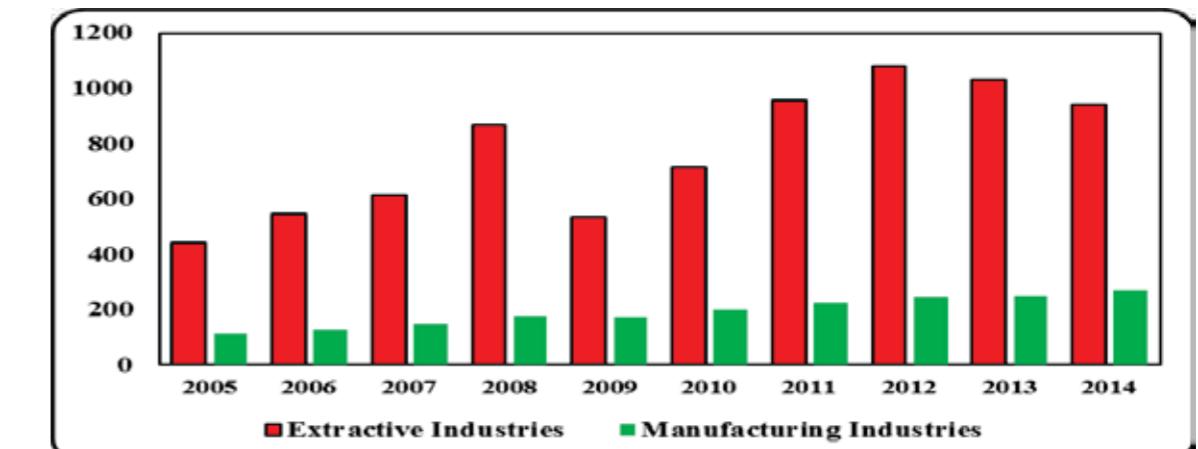

Total **Industrial Production** in Arab countries was recorded at about USD 1214 in 2014, or about 44% of total Arab region GDP, down by 5.1% from the level observed in 2013. This is explained mainly by a contraction of extractive industry GDP by about 8.5% due to lower crude oil prices and production. However, manufacturing recorded a positive growth at about 9% in 2014 over the previous year. The industrial sector accounted for 17.4% of

employment of total Arab region work force. It helped strengthen the pace of development and improved living conditions in most Arab countries. Industrial per capita GDP was recorded at about USD 3530 in 2014, Extractive and manufacturing industries accounted for more than 90% of total Arab region exports.

Extractive Industries accounted for a significant share of Arab region GDP, that is 34.2%, more than one third of Arab region GDP in 2014. This high contribution enhances the importance and role of extractive industries in Arab economies. It has been reflected in production-based development and human development observed by many Arab countries over the last fifty years, particularly in GCC countries.

Manufacturing Industries performance indicators showed positive results. Value added in this sector grew by 9.0% in 2014, from USD 248.5 billion in 2013 to USD 270.8 billion in 2014. In other words, manufacturing accounted for about 9.8% of Arab region GDP. These positive results were the outcome of improved performance in most activities. Construction GDP grew by 8.7% in 2014 over the previous year, cement production by 9.9% from about 214 million tons in 2012 to 235 million tons in 2013, iron and steel production by 6.1% from 19.2 million tons in 2013 to 20.4 million tons, and fertilizers by 7.1% from 51.4 million tons in 2013 to 55.1 million tons in 2014, (Annex Table 4/1, 4/2 & Figure 4.1).

Figure 4.1
Extractive and Manufacturing Industries Value Added in Arab Countries
(2005-2014) Billion USD

Source: Annexes 4/1 and 4/2.

Indicators for quantitative targets of the **Arab Industrial Development Strategy (2005-2014)**, that aims at accelerating the pace of industrial growth in Arab countries to a minimum of 7%, show that the growth rate of industrial production during that period outpaced the targeted level in that strategy, as it reached 9.2% during that period. However, this growth rate is a bit modest when compared to others in many developing countries, particularly in East Asia. The growth rate of industrial production in the Arab region varied across extractive industries and manufacturing, at 8.8% and 10.6%, respectively, on the average.

Within the context of **Inter-Arab Industrial Cooperation and Integration**, Arab countries adopted a strategy to build industrial zones and cities in well-chosen areas following plans that take into account architectural, professional and environmental factors. These zones and cities have been provided with services and infrastructure as well as enabling legislation that attract and protect domestic, Arab and foreign investments. About 250 such zones/cities/clusters, as well as 12 free zones, were developed. They offer a good number of jobs and attract big industrial investments.

(Chapter 5)

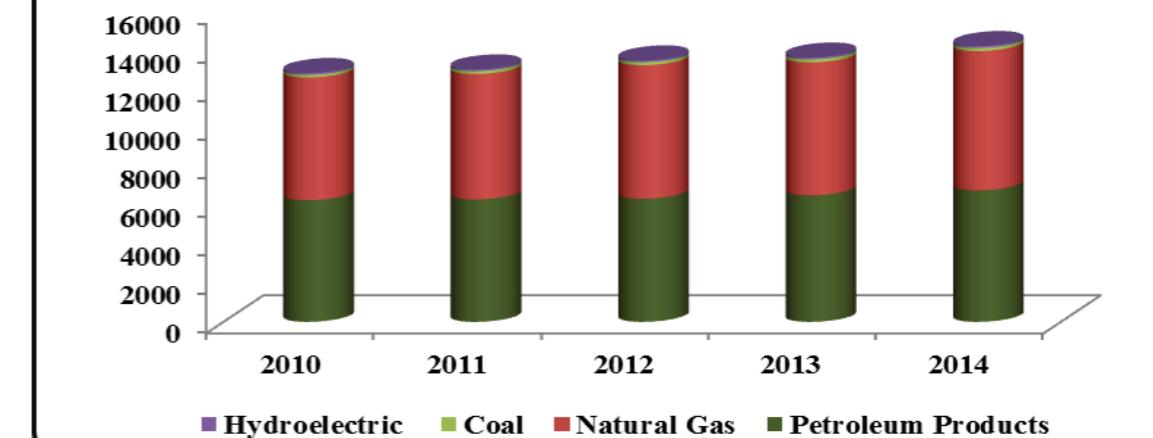

Oil and Energy

In the first half of 2014, oil market was relatively stable, reflecting a modest performance of the global economic growth. During the second half of the year, however, oil market was jolted by a sudden, sharp drop of **Global Oil Prices**, from USD 105.9/barrel for OPEC basket in 2013 to USD 96.2/barrel in 2014, the lowest level since 2010, reflecting a host of intertwined factors.

In 2014, **Proven Global Oil Reserves** slightly grew at 0.9% and proven global natural gas reserves also grew slightly at 0.4%. Total **Global Oil Supplies** (crude oil and liquefied natural gas) in 2014 grew at a significant rate of about 1.1 million b/d (1.2 percent increase compared to 2013) to reach 92.5 million b/d. This increase came mainly from

non-OPEC oil producers, particularly in North America. At the same time, OPEC crude oil supplies dropped in 2014 for the second year in a row to 30.8 million b/d. Growth of **Global Oil Demand** dropped below projections. Demand grew by only 1 million b/d, down from 1.3 million b/d in 2013. It reached 91.2 million b/d in 2014, (Annex Table 5/3 and 5/7).

Figure 5.1
Demand for energy in Arab countries
(Million barrels of oil equivalent/day)
(2010-2014)

Source: OAPEC, Secretary General Report, 2014.

Arab countries recorded 12 new oil discoveries and 5 new gas discoveries during 2014. The share of the Arab region in total proven oil reserves dropped from 55.6% to 55.2%, while its share of total proven gas reserves stabilized at 27.5% for the second year in a row. Arab region crude oil production dropped to 30.1% of total global production, down from 31% during the previous year. Its share of marketed gas slightly dropped to 17% of total global figures observed in 2013, (Annex Table 5/1 and 5/2).

Energy Consumption in Arab countries in 2014 increased at 4.3% to 14.3 million barrels of oil equivalent per day. Oil derivatives produced from oil and natural gas are the main sources of satisfying demand on energy in Arab countries. These sources covered over 98.2% of total energy needs in the region during the year. Drop in annual average prices of most main export crude oils in Arab countries during 2014 was reflected in total oil exports of these countries; as they dropped by 11.6% in 2014, (Annex Table 5/5 & Figure 5.1).

(Chapter 6)

Public Finance

The drop in global oil prices during 2014 had significant implications for fiscal revenue in a number of Arab countries whose budgets depend on oil revenues. But foreign grant inflows sustained fiscal position in a number of Arab countries that receive such grants. Tax reforms in a number of Arab countries helped widen the tax base and increase collection efficiency, with ensuing positive impact on fiscal revenue.

Some Arab oil producers opted to cut down public expenditure both in current and capital budgets in view of lower global oil prices, while others continue to follow expansionary policies, funding government expenditure through accumulated fiscal balances and surpluses. Arab countries with diversified economies opted to make use of the fiscal space provided by lower oil prices in order to adopt policies that contain public expenditure and to focus on social and investment spending as part of an effort to cut fiscal deficit and restore fiscal balance.

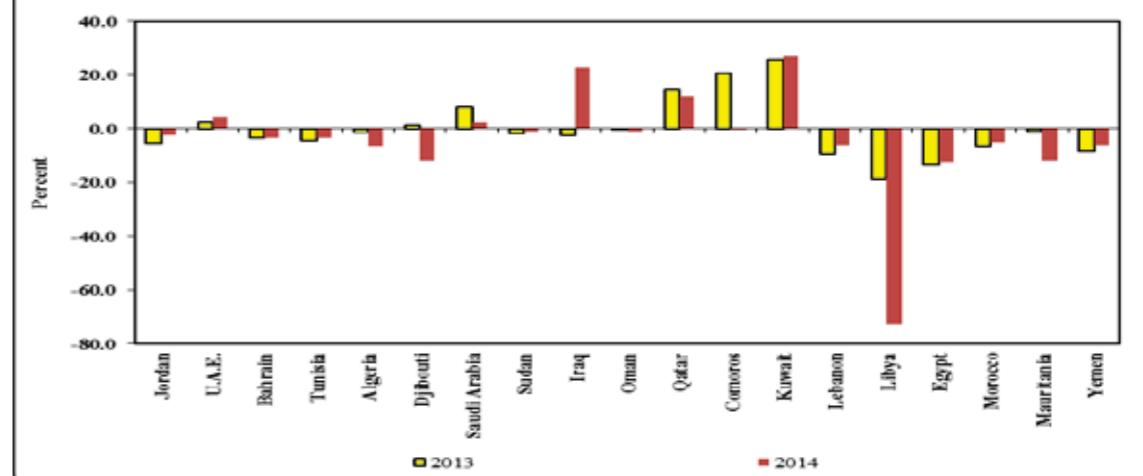

However, fiscal positions at both sides of revenue and expenditure were affected by internal conditions in a number of Arab countries during the year, with ensuing negative implications for investment and other economic activities. They were also affected by challenges created by the high economic and fiscal cost of security needs.

Against this backdrop, total **Public Revenue and Grants** for Arab countries combined dropped down by 6.2% to USD 952.6 billion in 2014, or 34.5% of GDP. Oil revenue dropped by 12.4% to USD 650.1 billion, while tax revenue strengthened slightly by 0.9% to USD 169.9 billion.

Total **Public Expenditure** in Arab countries combined dropped by 6.8% to USD 885.6 billion in 2014, or 32.1% of GDP. Current expenditure dropped by 10.6% to USD 645.6 bn. while capital expenditure increased by 5.4% to USD 238.4 billion.

As an outcome of these developments, **Aggregate Fiscal Surplus** for Arab countries grew at 3.1% (that is, about 2.0 billion USD) to about USD 67 billion in 2014, or 2.4% of GDP for Arab countries combined. In the case of oil-producers, aggregate fiscal surplus dropped by 1.8% to USD 114.7 billion (5.2% of GDP) while aggregate budgets for Arab diversified economies combined recorded some improvement as deficit decreased at 8% to USD 47.7 billion (or 8.9% of GDP), (Annex Table 6/10 & Figure 6.1).

Figure 6.1
Fiscal Overall Deficit/Surplus to GDP in Arab Countries
(2013-2014)

Source: Annexes 6/1 and 6/5

Total outstanding **Public Debt** (both domestic and foreign), for Arab borrowing countries for which data are available, increased by 4.9% to USD 618.1 billion in 2014 against about USD 590 billion in 2013. Thus, public debt as a share of GDP increased to 53.6% in 2014 against 51.9% in 2013.

(Chapter 7)

Monetary, Banking and Capital market Developments

The pace of monetary expansion moderated significantly in a number of Arab countries, reflecting several factors, mainly the significant drop in net foreign assets (NFAs) that had a contractionary effect on domestic liquidity growth rates in a number of Arab countries, as well as the effect of persisting lower growth rates of net domestic credit, whether due to

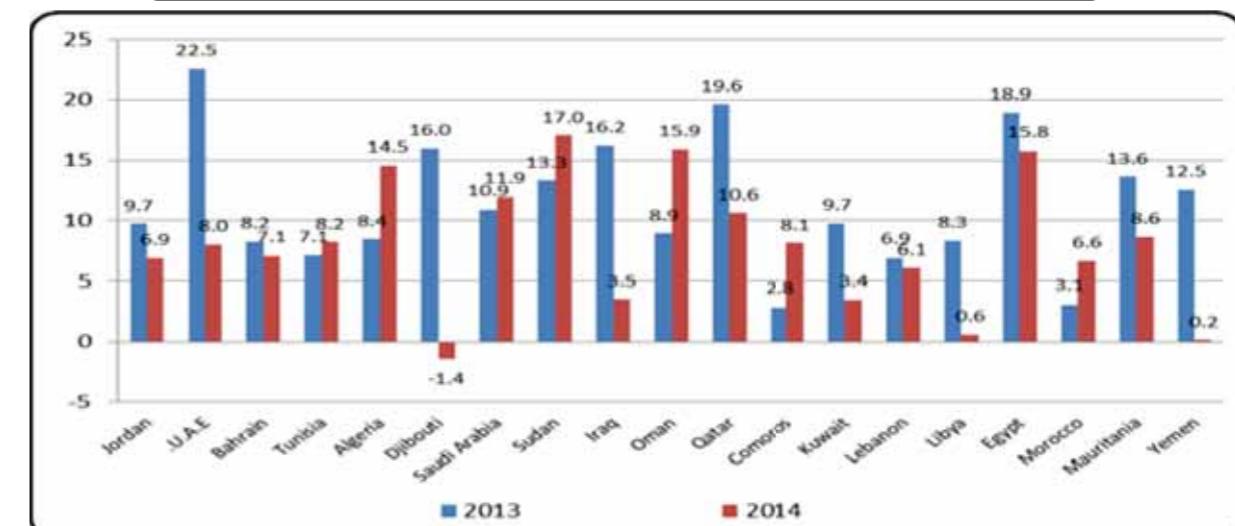

persisting lower growth rates of credit to private sector or due to continued fiscal reforms aimed at containing fiscal deficits, with ensuing lower growth rates of credit to the government sector.

During the year, central banks and monetary authorities in Arab countries continued to employ indirect **Monetary Policy** instruments to manage domestic liquidity and achieve monetary policy ultimate targets, mainly price stability and stimulated economic growth. Within this context, intervention by central banks continued to mop up excess liquidity in some Arab countries, particularly those that adopt fixed exchange rate regimes, even though these interventions largely decelerated in a number of countries. Meanwhile, the impact of liquidity crunch in other Arab countries continued to be felt. This required regular intervention by central banks to develop new liquidity support mechanisms and enhance existing ones.

Furthermore, Arab central banks made efforts to develop monetary policy operational frameworks through several mechanisms, mainly the development of inter-bank markets with a view to increasing the efficiency of monetary transmission channels to economic activity. Additionally, some banks introduced domestic liquidity management and forecasting frameworks in coordination with ministries of finance in order to improve monetary policy functioning. They also developed new monetary instruments that would help in managing liquidity of Islamic banks, reflecting the growth of Islamic banking in some Arab countries.

As to factors that affect **Domestic Liquidity**, domestic liquidity positions in Arab countries as a group underwent a significant change during the year. There was a large shift in the contribution of factors driving domestic liquidity due to a large drop in net foreign assets as a source of domestic liquidity expansion. This, in turn, was the result of lower net foreign assets as a result of the decline in oil revenues reflecting the drop in oil prices during Q4 of 2015. However, the contribution of net domestic credit increased significantly, whereby it became the primary factor affecting domestic liquidity in some Arab countries including oil-exporting countries. (Annex Table 7/1 & Figure 7.1).

Figure 7.1
Domestic Liquidity Growth Rates in Arab Countries
(2013-2014)

*Data for Saudi Arabia for M3.
Source: Annex 7/1.

The **Banking Sector** continued to perform positively. Credit facilities to the private sector grew at rates that exceeded the outcome of the previous year. Total deposits also increased, although at lower rates than observed in the previous year. Earnings indicators for the majority of Arab banks improved this year. As to important developments related to legislation and regulation during 2014, supervisory and oversight authorities in Arab countries continued efforts to modernize and develop the whole system of laws, regulations and circulars, in tandem with international developments, and to adopt measures to implement the latest Basel standards, particularly on liquidity risk and governance regimes and rules. Arab central banks and monetary authorities paid particular attention to issues related to financial stability, (Annex Table 7/6, 7/7 & Table 7.1, 7.2).

Change (%)	10.1	7.8	11.3		

Source: Annexes 7/7 and 7/8.

As to **Arab Capital Markets**, in 2014 the total capitalization of Arab stock exchanges as a group increased by 7% to about USD 1203 bn by the end of 2014, gaining about USD 65.0 bn in capitalization. This improvement was accompanied by an improvement in the business of primary issuance market, both in numbers and value. Foreign investment on Arab stock exchanges recorded a positive net inflow for the second year in a row. Supervisory and oversight authorities during 2014 made efforts to cope with recent developments on global financial markets through amendments to laws, regulations and circulars, particularly those on trading, clearance and settlement, following the improvement in a number of Arab financial markets to ranks that are comparable to those in emerging economies. Some Arab stock exchanges developed a system of legislation and regimes on SMEs with a view to listing, or creating separate stock exchanges for, those enterprises.

(Chapter 8)

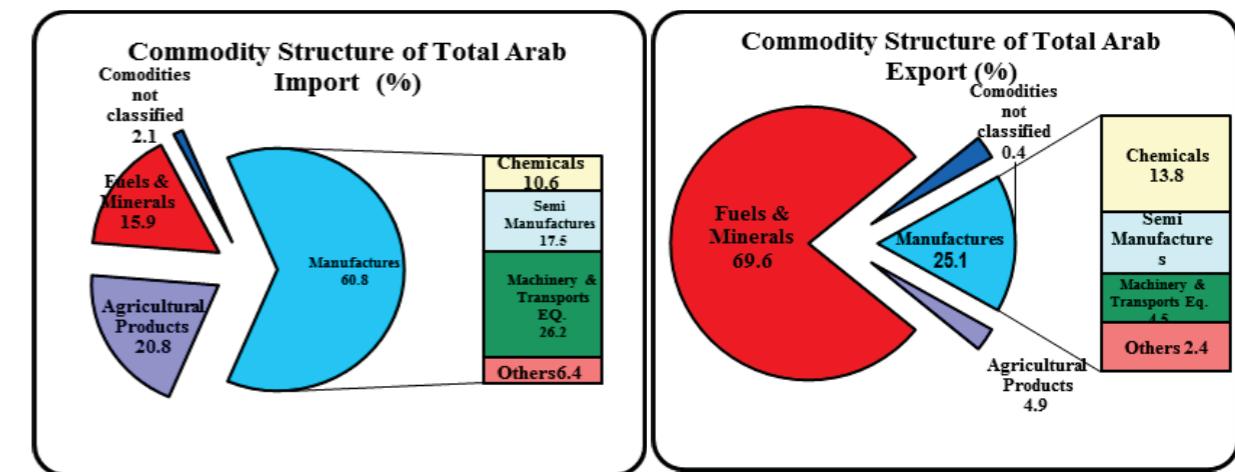

International and Intra-Regional Trade

Total value of **Arab Foreign Trade** dropped by 2.7% in 2014 to reach USD 2118.9 billion, down from USD 2176.9 billion in 2013. This was a result of the drop in total value of Arab commodity exports by 6.6% to USD 1230 billion in 2014, down from USD 1316 billion in 2013 due to lower oil prices since the second half of 2014. As to the performance

of total Arab commodity imports, there was a 3.3% increase to USD 889.3 billion in 2014 against USD 860.6 billion in 2013, (Annex Table 8/1).

As to **Direction of Arab Commodity Trade** in 2014, data show a decrease in Arab exports to the US, EU, Japan and rest of the world. Arab exports to China and the rest of Asia increased. Arab commodity imports from main trade partners increased, Imports from Asia constituted the major share of total Arab imports (38.2 %) in 2014, (Annex Table 8/3& Figure 8.1).

Figure 8.1
Commodity Structure of foreign trade of Arab Countries (2014)

Source: Annex 8/3.

On **Commodity Structure** of trade, fuels and minerals accounted for the greatest shares of total Arab exports. The share of manufactured goods increased and the relative weight of chemicals increased. As to simple products and agricultural produce, their relative weights decreased in 2014. Import data show that manufactured goods accounted for the largest share of Arab imports. The share of chemicals increased, while that of agricultural commodities decreased in 2014.

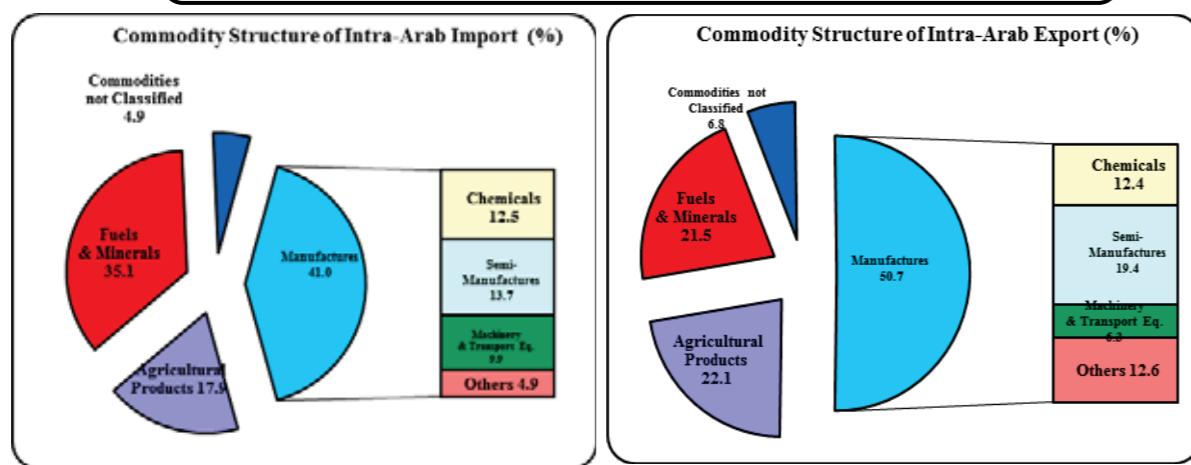

The performance of **Intra-Regional Trade** performance was affected significantly by lower global oil prices as well as persistent domestic development in some Arab countries that affected intra-regional trade, particularly with neighbor countries. These developments

pushed freight and insurance costs upwards. As a result, intra-regional trade recorded a slight growth at 5.4% to USD 121.9 billion in 2014 against a growth of 4.5% during 2013. This was the outcome of higher growth of intra-regional exports at 6.2% and a lower growth of intra-regional imports at 4.7% during 2014.

As to the development of commodity composition of intra-regional trade, intra trade in crude oil accounted for 6.7% of the average value of intra-regional trade, i.e., USD 8.1 billion during 2014. Among non-oil intra trade components, the group of manufactured goods accounted for the largest share, followed by agricultural goods.

In 2014, **Trade in Services** continued to be affected by domestic conditions in some Arab countries. These affected all components of service balance in those countries. Trade in services was also positively affected by higher levels of government expenditure, thanks to the adoption of national mega projects by some Arab countries. Receipts of service exports for Arab countries as a group increased during 2014 at 11.8% to USD 137.1 billion, up from USD 122.6 observed in the previous year. Total payments for service imports for Arab countries increased to USD 332.5 billion against USD 288.7 billion during 2013, a 15.2% increase. As a result, services balance for Arab countries as a group widened further during 2014, from USD 166 to USD 195.3 billion, a 17.7% increase, (Annex Table 8/5, 8/6, 8/9 & Figure 8.2).

Figure 8.2
Commodity Structure of Intra-Regional Trade
(2014)

Source: Annex 8/9

On developments related to **The Greater Arab Free Trade Area (GAFTA)**, one issue was the liberalization of commodity trade. In this respect, negotiations continued during 2014 with a view to addressing and completing the legislative architecture of GAFTA as adopted at the Riyadh Summit and on which some progress was made following the 2013 Doha Summit, particularly on detailed rules of origin and non-tariff barriers. This resulted in the finalization of implementation process for GAFTA for the treatment of products of free zones on an equal footing with foreign products when they are exported to GAFTA members.

Liberalization of trade in services has become a central component of all free trade agreements and regional arrangements. Early in 2002, Arab countries started negotiations on an Intra-regional Agreement of Liberalization of Trade in Services. One of the challenges Arab countries face before they can make progress on such an agreement is the fact that they have different negotiation capabilities on issues related to trade in services, different technical capabilities, apart from the quick turnover of negotiators entrusted with the dossier on trade in services at the WTO.

On preparations for the Arab Customs Union, the Committee on the Unified Arab Customs Law is the body in charge of all issues related to Unified Customs Law, Regulations and Interpretive Notes. The Committee on Customs Procedure and Information has been entrusted with the task of unifying customs procedure and forms to be used by customs administrations of member countries. Within this context, the period 2015-17 was identified for the revamp of customs points in Arab countries and finalizing draft Unified Arab Customs Law, Customs Procedure Guide, and Unified Arab Customs Declaration Form.

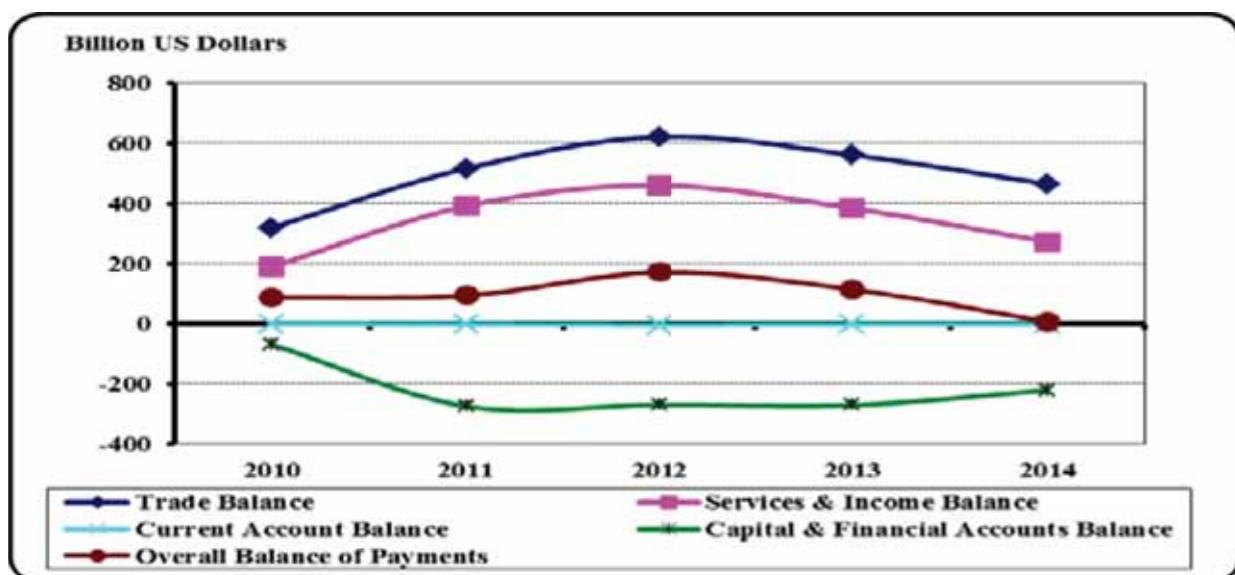

(Chapter 9)

Balances of Payments, External Public Debt and Exchange Rates

During 2014, **Balances of Payment of Arab Countries** were affected by the significant drop in global oil prices, particularly during Q4 when oil prices plummeted at about 27%, apart from the effect of expansion in public investment expenditure and the adoption of a

number of infrastructure mega projects by some Arab countries. Balances of payments of non-oil Arab countries were negatively affected by lackluster global economic growth, particularly in the euro area, the major trading partner. As a result, transactions between Arab countries as a group and the rest of the world showed a decrease in total surplus of Arab balances of payments from USD 115.1 billion in 2013 to a modest USD 5.9 in 2014, (Annex Table 9/1 & Figure 9.1).

Figure 9.1
Balance of Payments for Arab Countries as a Group
(2010-2014)

Source: Annex 9/1

Total **External Public Debt** for borrowing Arab countries increased slightly by 0.7% in 2014 to USD 206.8 bn. This is explained by the decision of several Arab countries to borrow on external markets in order to finance fiscal deficit that remains at high levels. External public debt service increased by 26.6% to USD19.3 billion.

External indebtedness indicators for Arab borrowing countries as a group show that external public debt to GDP ratio decreased from 22.7% in 2013 to 21.7% in 2014 as GDP growth rate exceeded that of external indebtedness. External public debt service to exports of goods and services ratio for borrowing Arab countries remained unchanged at 5.9%, (Annex Table 9/6, 9/7, and 9/8).

Global exchange rate developments had their impact on **Arab Currency Exchange Rates**, particularly in view of gains made by the US dollar during the year thanks to recovering

regime, whether free or managed floating, mostly depreciated against both the US dollar and the euro. The Sudanese pound recorded the greatest depreciation against these two currencies during the year, reflecting pressures on exchange market in the Sudan since the secession of the South with ensuing loss of a significant source of foreign exchange, (Annex Table 9/11 -9/14).

(Chapter 10)

Thematic Chapter:

Improving Linkages Between Education System and Labor Markets In Arab Countries

The thematic chapter of the current report discusses the main reasons behind the lack of harmony between outputs of education system and the needs of labor markets in Arab countries. It reviews the main challenges the education system faces in improving the employability of graduates as well as policies that can successfully fill the gap between outputs of education system and the needs of labor markets. These challenges undermine the employability of graduates and negatively affect the quantity and quality of **Labor Supply**. They include the fact that the public sector has been “the employer of last resort” and the major client of education system, a fact that has shaped an education model that is meant to produce and appreciate the certification needed for employment with public sector. The absence of incentives, weak governance within the education system and the lack of mechanisms for accountability on quality caused a dichotomy between academic institutions on the one hand and their milieu on the other, particularly business sector and civil society. This also led to the preference being accorded to passing exams, selectivity in taking university disciplines, rigid mechanisms for allocating students to different divisions without due regard to emerging needs on the labor market or improvement of qualifications and skills. Also the lack of the culture of merit in the region in general widened the gap between outputs of education and the requirements of employment and raised the relevance of the certification per se at the expense of skills and efficiency.

Some literature and surveys suggest that getting an employment with the public sector in Arab countries largely reflects factors that are beyond the control of an individual, including gender, place of birth, and education level of parents. Furthermore, the allocation of jobs in both public and private sectors is made in many cases on the basis of influence, “connections” or personal relations rather than efficiency, skills and individual endeavor of job seekers. This undermines the societal value of knowledge and the need to acquire skills. It also undermines efforts by Arab countries to establish social equity and equal opportunity principle.

Another weak link is the low quality of education. Despite huge spending on education and increasing enrollment rates, achievements on quality of education leave a great deal to be desired compared to global average, as evidenced by results achieved by Arab students in international math and science competitions. Education reform programs did not achieve significant success in providing students with skills, knowledge and capabilities needed for increased productivity and comparative advantages based on innovation and creativity. This reflects significant demographic pressures, scarce resources and increasing demand on education services and the priority being accorded to numerical targets over education quality.

On **Labor Demand**, the chapter highlights the fact that, in view of the prevalent development model and lack of diversification, apart from other distortions in macroeconomic and sectoral policies, Arab economies have not been able to generate new jobs for a fast growing labor force. Labor markets could not identify where supply would be equal to demand so that they may function well. This is due to lack of information and communication mechanisms between job seekers and employers, the absence of a clear structure of professional qualifications and standards that links available jobs to needed skills, in addition to the lack of experience and incentives in employment offices, lack of transparency in filling vacancies, and proliferation of recruitment based on “connections” and personal relations.

Due to these difficulties, recommendations have been made for **Improving Linkages Between Education System and Labor Markets** in Arab countries. The first part of those proposals focuses on enhancement the role of education system in order to improve the

outlook for recruitment of its graduates. The second part focuses on the role of macroeconomic and sectoral policies in stimulating demand and improving employment policies and labor market mechanisms.

The first part focuses on the importance of **The Role Of Education System In Improving Employment Outlook** through improved quality of education and curriculum, enhancement of the role of the state in knowledge acquisition system, review of policies and mechanisms of tertiary education funding, enhancement of the role of universities in improving recruitment outlook for their graduates, shift from certificate generation to skill generation, from selectivity and exams to human capital formation and acquisition of knowledge. It also highlights the need to improve governance within education institutions through enhanced accountability and quality control mechanisms, promote the engagement of private sector and NGOs in education policy making, provide necessary incentives to all stakeholders in order to increase harmony between outputs of tertiary education and labor market needs. Concurrently, accountability for performance, evaluation and appropriate frameworks for quality assurance should be promoted, particularly through neutral bodies and committees that are dependent from institutions whose performance is to be evaluated. This calls for bridging the gap between outputs of education system and labor market needs, promoting technical education and removing the stigma attached to that kind of education in the Arab region. It further reiterates the importance of opening tertiary education to its milieu, particularly international environment, through partnerships with universities and research centers and exchange of experience and knowledge.

On macroeconomic and sectoral policies, the chapter concludes that there is need to review the old development model and related social contract, mainly through the establishment of merit culture, transparency in vacancy filling, focus on policies that stimulate economic growth and increase productivity, enhancement of the role of private sector in employment through removing distortions in the structure of wages and fringe benefits. These actions would help enhance work culture in public sector, remove impediments resulting from uncondusive investment and business environment, promote SMEs with a view to formalizing the largest possible part of informal sector, adjust macroeconomic policies, complete pending reforms in fiscal, foreign trade and finance sectors, and improve

legislation and mechanisms that govern labor markets, amend employment policies and programs, evaluate existing programs to identify shortcomings, promote skill formation programs for temporary migration, and activate inter-Arab and international cooperation on movement of labor and skills, particularly in countries with abundant educated labor supply.

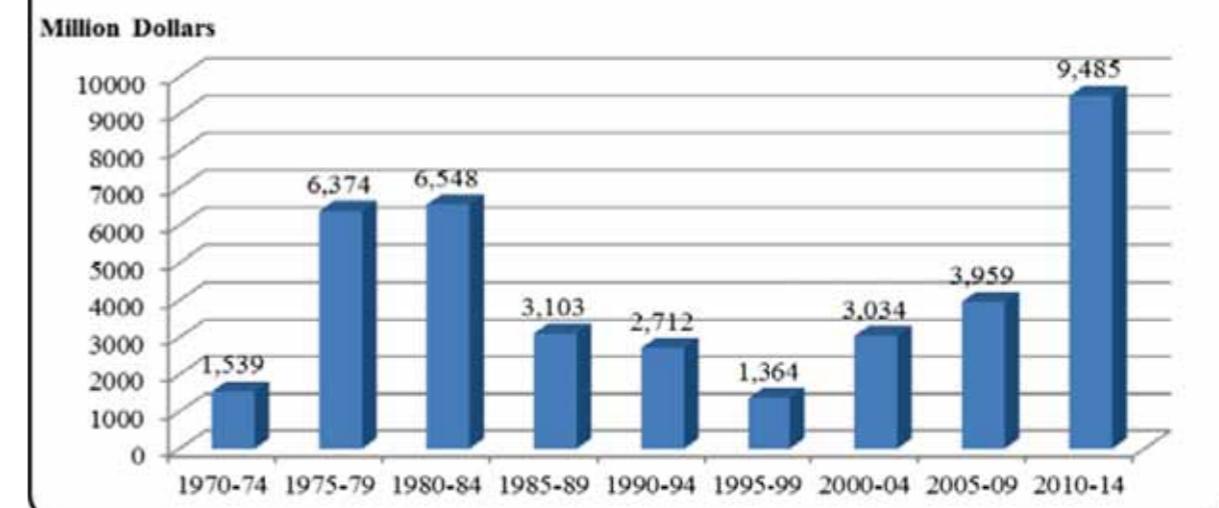

(Chapter 11)

Arab Development Assistance

Arab Development Assistance accounts for a significant share of economic cooperation between Arab and other developing countries. Development assistance is provided by Arab countries through multiple channels, including bilateral official assistance and development finance through the Institutions of Arab Coordination Group⁽¹⁾, apart from assistance provided by charities and other NGOs to support poverty reduction projects, health, education and relief programs. As well as Arab country contributions through international aid donors.

Official concessional **Development Assistance Extended by Donor Arab Countries**⁽²⁾ increased to USD 18.5 billion in 2014, i.e., an increase of USD 4.7 billion over 2013. Thus, total concessional development assistance extended by Arab countries during the period 1970-2014 was USD 190.6 billion. Arab development assistance as a percentage of total GDP for major donor countries was 1.11% in 2014.

Figure 11.1
Arab Official Development Assistance (Net Disbursements)
(1970-2014)

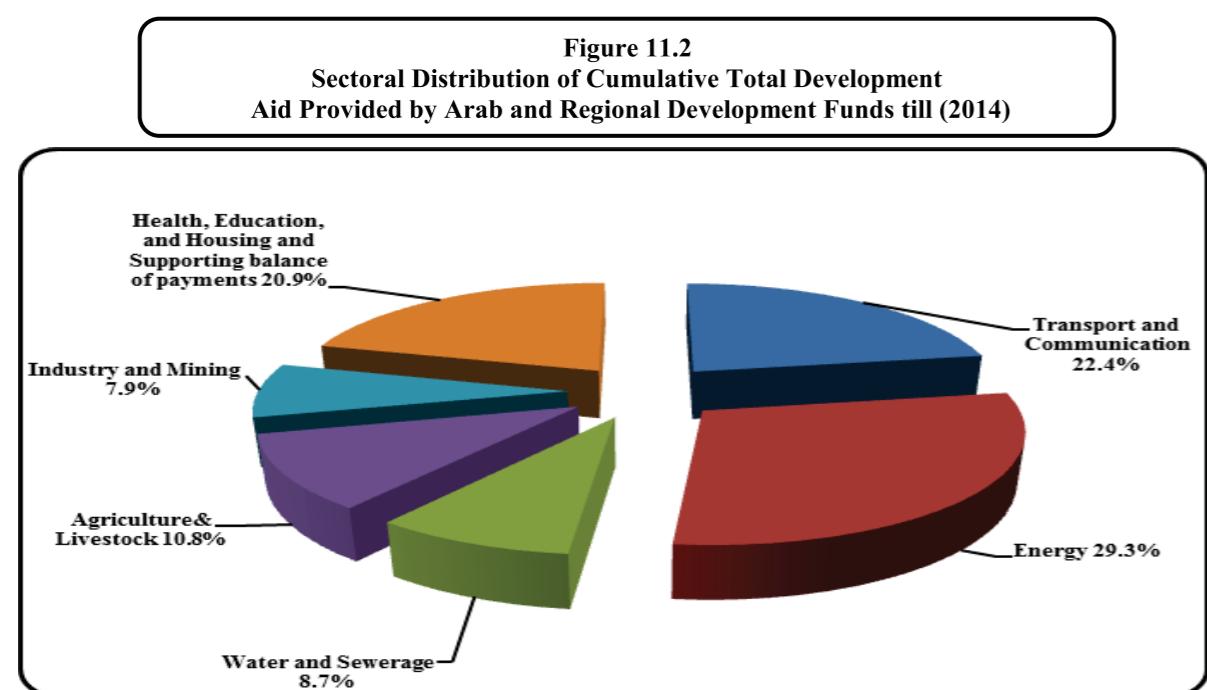

Source: Annex 11/1

On the other hand, aid extended by the **Institution of Arab Coordination Group** was USD 15.4 billion in 2014, up from USD 12.3 billion in 2013, i.e., an increase of 25.2%. Commitments extended by these institutions to Arab countries accounted for 45.1% in 2014 against 47.4% in 2013. Sectoral distribution of finance operations by member institutions of the Coordination Group for 2014 suggests a continued focus on support to infrastructure projects, particularly energy projects of different kinds. Total development assistance for these projects in 2014 accounted for USD 6.6 billion, i.e., 43.1% of total assistance extended during the year, (Annex Table 11/3).

Total official development assistance (ODA) extended to Arab countries from all sources, excluding Arab institutional aid, was USD 22 billion in 2013, i.e., an increase of 47.3% over 2012. This assistance accounts for 14.7% of total official development aid extended to developing countries during 2013.

⁽¹⁾ The institutions of Arab Coordination Group consists of nine institutions, three of which are national institutions including the Kuwait Fund for Arab Development, the Saudi Fund for Development, the Abu Dhabi Fund for Development, the six regional organizations are the Arab Fund for Economic and Social Development, Islamic Development Bank, OPEC Fund for International Development, the Arab Bank for Economic Development in Africa, the Arab Gulf Program for United Nations Development Organizations as well as the Arab Monetary Fund.

⁽²⁾ This amount includes total developmental assistance commitments by Saudi Arabia and net withdrawals for other countries.

Source: Annex 11/6.

The accumulative total of commitments for finance operations extended by member Arab development institutions of the Arab Coordination Group was USD 130.5 billion by the end of 2013. This was contributed to finance 7020 development projects across 130 countries. These projects cover different economic and social sectors and activities, (Annex Table 11/4 & Figure 11.2).

(Chapter 12)

Intra-Arab Cooperation on Marine Transport and Logistics

Marine transport is a global economic sector that has been affected most by global economic developments. It handles a significant share of international trade exchanges. Furthermore, this vital economic sector is one of the most important and richest productive power houses in terms of income and value added generation. Conglomerates working in that field have understood the importance of this sector and the need to further develop it in tandem with a growing demand on international marine trade, and an expanding need to fleets, piers, terminals and port-related distribution networks. This led to the establishment of new benchmarks for international competition and new standards for logistics quality in

services delivered by fleets and ports to global market clients, including shippers and importers.

Economic evidence worldwide suggests that trade and transport are positively correlated and that they are interdependent. The efficiency of transport affects that of trade and the development of one of them implies development of the other. In the Arab region, inadequate regular marine transport lines are among the factors that impede the development of intra-regional trade and affect the cost and volume of trade with certain world regions that do not receive regular sea marine transport lines. Despite the fact that most Arab countries are located on ocean, the volume of intra trade carried by sea continues to account for a low share of total intra-regional trade. In view of the above, this chapter sheds light on the current status of marine transport in the Arab region, the kind of challenges that face this sector and the ways and means to tackle such challenges.

Within this context, the Thematic Chapter for this year discusses inter-Arab cooperation in the field of marine transport and logistics. It defines divisions of marine navigation, the relative weight of trade carried by sea, the status of marine transport sector in Arab countries, obstacles facing efforts to further develop this sector in the Arab region, and the salient features of inter-Arab cooperation in marine transport. Furthermore, the chapter discusses logistic services delivered in Arab countries and makes certain recommendations on further developing that sector in the Arab region.

On the **Relative Weight of Trade Carried by Sea**, it is noted that there has been a significant growth of global trade carried by sea in different country groups. Worldwide, it increased from MT 15.7 billion in 2009 to MT 19 billion in 2013, a growth at 21.8%. Despite lack of data on the volume of trade carried by sea, it grew significantly also in the Arab region during the same period. This creates an obligation for Arab countries to pay greater attention to marine transport and emphasizes the need to create more regular lines across Arab sea ports, as a channel to further develop intra-regional trade.

The chapter also discusses the **Status of Marine Transport in the Arab Region**. It notes that this sector assumes a special importance in the Arab region in view of its location and natural resources, including oil and gas. Arab fleets as a group, including oil tankers, general merchandise ships and container carriers have increased during the period 2011-

15. It is further noted that oil tankers account for about 51% of total Arab merchant fleets combined, with a total tonnage of MT 8431.5 thousand. This is explained by the high relative weight of oil exports as a share of total Arab exports.

Despite physical, human and financial resources possessed by Arab countries that would contribute to a greater intra-regional trade, which would positively reflect on a more developed marine transport sector, there are currently some challenges that limit the potential for growth of this vital sector. These challenges may be divided into four groups, namely, economic challenges, mainly the modest contribution by Arab private sector to investment in marine transport sector; administrative challenges created by red tape and excessive licensing requirements; legal challenges created by the lack of harmonization of applicable laws and codes on marine transport in Arab countries; in addition to some other challenges.

On Inter-Arab Cooperation in Marine Transport, it is vitally important to note that an essential part of this cooperation is the Arab-international cooperation in this sector. The accession by Arab countries to international conventions and agreements on marine transport has paved the way to facilitate inter-Arab cooperation in this respect. On inter-Arab cooperation, the Arab League managed to finalize the “Agreement on Multi-means Transport of Goods among Arab Countries”. This was the result of the integration of two draft agreements that were under preparation at that time, namely, draft Agreement on Multi-Means Transport of Goods in the Arab Mashreq Region, adopted by UN-ESCWA; and the draft Agreement on Multi-Means Transport of Goods developed by the Arab League Council of Transport Ministers, with a view to increasing intra-regional trade, particularly following the adoption by Arab League Economic and Social Council of Resolution on the Implementation Program of GAFTA.

The creation of the United Arab Shipping Company in 1976 is another important development towards strengthening inter-Arab cooperation in this field. It grew into a world class company with a service network that covers 240 ports around the world. Using a modern, efficient and environment-friendly fleet, it provides traditional (dry) and refrigerated goods container transport as well as other logistic services to a wide range of clients around the world.

International indicators for logistic services show the special status assumed by UAE in this respect, as the 27th worldwide and the first in the Arab region. UAE has been classified as the 24th on logistic services performance and the 22nd worldwide in terms of customs services. Qatar came second in the Arab region and 29th worldwide, at 34 in terms of logistic services with a score of 3.35, followed by Saudi Arabia as third in the Arab region with a score of 3.16 on logistic service performance. One of the most important projects currently implemented in marine transport and logistics is the one in Egypt. It would generate benefits to neighboring countries. It is the Suez Canal Corridor, a national mega project through which sea ports and logistics centers in Egypt and other Arab countries will be connected. It will reduce the anchorage time to 3 hours in worst weather conditions instead of 8-11 hours, with ensuing cost savings and higher traffic through the canal.

There are several other sea ports in Arab countries that perform logistics activities. Dubai for instance, makes every effort to further elevate the global and regional rank of UAE as a center of excellence in operating sea ports and marine stations and a hub for expertise in different fields, particularly merchant sea-ports, shipping and logistics. Saudi Arabia has made tremendous efforts in developing sea ports and creating state of the art ones. Before 38 years, foundations were laid in Saudi Arabia for a network of sea ports by the Saudi Arabia Sea-port Public Corporation that turned the erstwhile modest loading and unloading wharfs managed and operated by the state into full-fledged industrial cities that offer a whole range of logistic services.

The chapter concludes with a number of recommendations that may help **Enhance Inter-Arab Cooperation in Marine Transport and Logistics** and promote this vitally important sector. They include, mainly, the integration of Arab countries into geographic common markets that can face advanced economic blocs with high-level logistic support, the creation of an Inter-Arab Logistics Council as well as similar individual country councils, further development of national legislation on marine transport and logistics in a way that is responsive to the needs of Arab markets.

(Chapter 13)

The Palestinian Economy Developments

Palestinian economy was negatively affected by accelerated actions of occupation authorities during the year, with ensuing losses for all Palestinian economic activities. According to a report by the International Monetary Fund (IMF), the Israeli military action in Gaza in July 2014 caused the Gaza economy to contract by 15%. The impact of these Israeli policies was a contraction of the Palestinian economy in 2014, the first such contraction since 2006. This was caused by both the Israeli aggression against Gaza and the economic blockade against West Bank, including East Jerusalem.

Gross Domestic Product at constant prices dropped in 2014 to USD 7.45 billion, down from USD 7.48 billion in 2013, a drop of 0.4%. Per capita real GDP, in turn, dropped by 3.3% to USD 1734.6, a fact that aggravated structural imbalances in the Palestinian economy. **Total Investment** in 2014 dropped by 8.4% to USD 2.7 billion, down from USD 2.9 billion in 2013. This caused investment's share of GDP to drop from 23.8% in 2013 to 21.3% in 2014. Total consumption increased in 2014 by 9.7% to USD 15.9 billion, against USD 14.4 billion in 2013.

On the contribution of different economic sectors to GDP, the contribution of agricultural sector deteriorated due to continued control by occupation authorities over agricultural factors of production, including land and water. Furthermore, the contribution of industrial sector to GDP in 2014 deteriorated to 11.6% due to continued Israeli blockade against Gaza. Building and Construction contribution to GDP also deteriorated, for the second year in a row, to 7.2% in 2014 despite the fact that it had been one of the fastest growing sectors of the Palestinian economy. On the contrary, services sector contributed the major share of GDP, at 77.4%, a fact that partially mitigated the contractionary effect of other sectors.

On **Social Developments**, the number of Palestinians in the old Palestine lands and the diaspora was about 12.1 mn in 2014; up from 11.8 mn in 2013, of which 4.62 mn people live in Palestinian territories occupied in 1967. Palestinian labor force participation

increased for persons at the age of 15 and above by 8.6% in 2014. Despite a significant increase in labor force participation in 2014, unemployment increased to about 26.9% in 2014. This was a result of the fact that unemployment increase exceeded that of labor force participation, (Annex Table 13/1 & Figure 13.1).

In 2014, **Poverty** and reliance on international and humanitarian assistance continued to persist among wide sections of the Palestinian population. This caused a section of the Palestinian population to fall into persistent impoverishment. Based on 2014 figures, 35.5% of Palestinians in occupied territories live below poverty line, of which 52% live in Gaza and 19% live in the West Bank.

On foreign trade, Palestinian net trade balance deficit persisted, reaching USD 5.5 billion, an increase of 15.9% in 2014, due to occupation authority policies. In 2014, the Palestinian government continued fiscal management efforts in a way that aims at reducing fiscal deficit, ensuring fiscal sustainability and reducing dependence on donor support in an uncondusive environment of receding donor support and falling development spending.

(1) Nationals and expatriates. Unemployment rate among nationals is estimated at 14.0%, (about 35,000 unemployed).

(2) Unemployment rate among nationals is estimated at 12.1%, (about 603,0

Annex Table (2/19) : Selective of Development Indicators of the Arab Countries

Indicator	Year	Index	Value
Population, urban (% of total)	2013	60.0	%
Population ages 0 -14 (% of total)	2013	30.0	%
Population ages 15-65 (% of total)	2013	65.0	%
Population ages 65 and above (% of total)	2013	5.0	%
Illiteracy rate, adult total (% of people ages 15 and above)	2012	22.5	%
Illiteracy rate, adult male (% of males ages 15 and above)	2012	14.9	%
Illiteracy rate, adult female (% of females ages 15 and above)	2012	30.8	%
Illiteracy rate, youth total (% of people ages 15-24)	2012	10.3	%
Illiteracy rate, youth male (% of males ages 15-24)	2012	7.2	%
Illiteracy rate, youth female (% of females ages 15-24)	2012	13.6	%
Gender literacy gap, adult total	2005-2012	0.8	
Gender literacy gap, youth total	2005-2012	0.9	
Total enrollment, primary (% net)	2012	88.4	%
Total enrollment, primary, Male (% net)	2012	90.4	%
Total enrollment, primary, Female (% net)	2012	86.3	%
Gender enrollment gap in primary education	2012	0.93	
Expected years of schooling in primary education , Total	2012	11.8	Year
Expected years of schooling in primary education , Male	2012	12.2	Year
Expected years of schooling in primary education , Female	2012	11.5	Year
Dropout rate in primary education , Total	2011	9.0	%
Dropout rate in primary education , Male	2011	6.0	%
Dropout rate in primary education , Female	2011	12.0	%
Public expenditure on education as a percentage of GNP	2011	4.5	%
Public expenditure on education as a percentage of total public expenditure	2011	16.0	%
Life expectancy at birth, total (years)	2013	71.0	Year
Total fertility rate, (births per woman)	2013	2.8	Child
Mortality rate, infant (per 1,000 live births)	2013	24.0	Child
Mortality rate, under-5 (per 1,000 live births)	2013	31.0	Child
Total expenditure on health as a percentage of GDP	2012	6.0	%
Public expenditure on Health as a percentage of total expenditure on health	2012	49.9	%
Improved water sources (% of population with access)	2012	88.0	%
Improved water sources, urban (% of urban population with access)	2012	94.0	%
Improved water sources, rural (% of rural population with access)	2012	79.0	%
Improved sanitation facilities (% of population with access)	2012	84.0	%
Improved sanitation facilities, urban (% of urban population with access)	2012	92.0	%
Improved sanitation facilities, urban (% of rural population with access)	2012	71.0	%

* Preliminary estimates.

- Canada's oil reserves exclude unconventional reserves such as oil sands.

- World's oil reserves exclude Bitumen and extra heavy oil in Venezuela.

- 50% of the Divided Zone's oil reserves is added to each of Saudi Arabia and Kuwait oil reserves.

* The OPEC basket of crudes (effective June 16, 2005) is comprised of Algeria's Saharan Blend, Iraq's Basra Light, Kuwait Export, Libya's Es Sider, Qatar Marine, Saudi's Arabian Light, UAE's Murban, Iran Heavy, Indonesia's Minas, Nigeria's Bonny Light, and Venezuela's Merey. Effective 1 January and mid of October 2007, Angola's Girassol and Ecuadorian Oriente crudes have been incorporated to become the 12th and 13th crudes comprising the new Opec Basket. As of Jan.2009, the basket excludes the Indonesian crude.

Annex Table (9/10) : Summary Features of Exchange Rate Arrangements in The Arab Countries, 2014

	Jordan	UAE	Bahrain	Tunisia	Algeria	Djibouti	Saudi Arabia	Syria	Oman	Qatar	Kuwait	Lebanon	Libya	Egypt	Morocco	Mauritania	Yemen
A. Current Arrangements of Exchange Rates																	
1. Pegged exchange rate to:																	
- US Dollar or Euro																	
- Special Drawing Rights (SDR)																	
- Specified Basket of Currencies (not declared)																	
2. Floating exchange rate																	
- Managed floating																	
- Independently floating																	
3. Exchange rate structure																	
- Unitary for current and capital transactions																	
B. Foreign exchange market (spot exchange market)																	
C. Forward exchange market																	
D. Status under IMF Articles of Agreement																	
- Acceptance of Article VIII: (Avoidance of restrictions on Current Payments) ⁽¹⁾																	
- Acceptance of Article IV ⁽²⁾																	

(*) Indicates that this is a feature of the country's exchange rate arrangement;

(-) Indicates that this is not a feature of the country's exchange rate arrangement;

- (1) Article VIII - Section 2: A member shall not impose restrictions on the making of payments and transfers for current international transactions; - Section 3: No member shall engage in any discriminatory currency arrangements or multiple currency practices;
- (2) Article XIV: A member shall notify the Fund whether it intends to avail itself of the transitional arrangements for maintaining any exchange restrictions inconsistent with article VIII, Section 2,3 or 4, and to prepare to adopt to changing circumstances the restrictions on payments and transfers for current international transactions that were in effect on the date on which it became a member.

(1) The rate applied to all public sector transactions. Since 2000, the rate was the free market foreign exchange rate, set to reflect developments in the free market exchange rates offshore in the neighboring countries. Effective 2007, the reported exchange rate which unified the exchange rates was called (market exchange rate of foreign currencies).

(2) The average annual change was calculated on the basis of national currency units per US dollar; a sign (-) stands for appreciation of the value of the national currency.
